

TrueClickFonCall

WEB Based Phone Calls

IT'S A JAVA PHONE!!!!

Fon calls directly from your website to any phone

CyLogistics announces TrueClickFonCall for instant VoIP communications over the Internet. TrueClickFonCall provides a web surfer with any browser the ability to click on a link and call a predetermined phone/VoIP connection without the need of a phone. TrueClickFonCall is available through a Java applet. Your customer uses his existing sound card to reach you - all through VoIP with ZERO software installation. When a potential customer wants to speak with a sales representative, the customer just uses TrueClickFonCall with NO Downloads or Pop-ups and is speaking with your sales team a few moments later. It is an easy integration into any website. A simple html cut and paste delivers a seamless integration with most SIP based PBX / VoIP platforms.

Features:

- Click-To-Fon-Call available through Java applet.
- Use it with any browser on Java enabled system
- Your customer uses existing sound card to reach you.
- Conceivably all through VOIP with ZERO software installation.
- If a sound card and microphone is not available, traditional click-to-Fon-call is available using customer's nearest phone.
- Easy integration into any website. Administrator site will generate a simple html snippet you can post to:
 - a website
 - email signature
 - etc.
- Simple html cut and paste
- Seamless integration with most SIP based PBX / VOIP platforms
- No Software Downloads
- No Pop-Ups necessary

Benefits:

- Let your prospects hear your telephone Quality.
- Advertise your products
- Give your customers a Free Call
- Give your customers access to phone sales or support from the WEB

Applet size:

- 243725bytes (244KB)

Platform:

- Linux
- Java / Apache Tomcat
- IAX2 protocol (SIP in next release)
- Compatible with Asterisk, FreeSwitch. Any other platform that supports IAX2 protocol

Codecs supported:

- g.711u • g.711a • gsm • speex

Extensible API: Allows user to re-"skin" the interface with any look and feel they like.

We provide a .jsp interface that allows someone with HTML skills to modify the "look and feel" to meet your company needs.
